INTERNATIONAL SEARCH REPORT

International application No.

PCT/US04/34856

This international search report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons: 1. Claims Nos.:	Box No. II	Observations where certain claims were found unsearchable (Continuation of item 2 of first sheet)		
because they relate to subject matter not required to be searched by this Authority, namely: 2. Claims Nos:: because they relate to parts of the international application that do not comply with the prescribed requirements to such an extent that no meaningful international search can be carried out, specifically: 3. Claims Nos:: 12-27,34,40,43,49-53,56-64,72-75,78-79,83-104,108-110 because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a). Box No. III Observations where unity of invention is lacking (Continuation of item 3 of first sheet) This International Searching Authority found multiple inventions in this international application, as follows: Please See Continuation Sheet 1. As all required additional search fees were timely paid by the applicant, this international search report covers all searchable claims. 2. As all searchable chaims could be searched without effort justifying an additional fee, this Authority did not invite payment of any additional fee. 3. As only some of the required additional search fees were timely paid by the applicant, this international search report covers only those claims for which fees were paid, specifically claims Nos.: 4. No required additional search fees were timely paid by the applicant. Consequently, this international search report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.: 1 Remark on Protest The additional search fees were accompanied by the applicant's protest.	This international search report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:			
because they relate to parts of the international application that do not comply with the prescribed requirements to such an extent that no meaningful international search can be carried out, specifically: Claims Nos.: 12-27,34,40,43,49-53,56-64,72-75,78-79,83-104,108-110 because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a). INTERNATIONAL SEARCH REPORT

International application No. PCT/US04/34856

BOX III. OBSERVATIONS WHERE UNITY OF INVENTION IS LACKING

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1. In order for all inventions to be examined, the appropriate additional examination fees must be paid.

Group 1, claim(s) 1, drawn to a method of encoding based on field specific selection.

Group 2, claim(s), 2-11 drawn to a method of block encoding with correlation determination.

Group 3, claim(s) 28-33, 35-36, drawn to method of encoding based on identification of a target codeword.

Group 4, claim(s) 65-67, drawn to a method of encoding with selective coding mode based on a target rate/distortion criteria.

Group 5, claim(s) 68-71, drawn to a method of encoding involving selecting from among a plurality of different encodings.

Group 6, claim(s) 76-77, 81-82, drawn to a transmission method that involves format conversion.

Group 7, claim(s) 105-106, drawn to an arrangement of sensors in a grid wherein information provided by the sensors are encoded, then subsequently processed and compressed.

Group 8, claim(s) 107, 109, 111-114, drawn to a method of encoding that reencodes data from a plurality of decoders i.e., a transcoding method.

The inventions listed as Groups 1-8 do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: the special technical features exhibit in each of the groups 1 through 7 are distinct and may operate independently from one another an any encoding environment.
